urban environments. Stephen M. Wheeler is Associate Professor in the Department of Human Ecology at the University of California at Davis. Previously he taught at the University of New Mexico and the University of California at Berkeley. A member of the American Institute of

Sustainable Urban Development Reader | Stephen M. Wheeler ...
Professor Stephen M. Wheeler, Ph.D., AICP is Associate Professor in the Landscape Architecture Program, Department of Human Ecology, at University of California, Davis. His areas of interest include sustainable development, planning for climate change, urban design, and built landscapes of metropolitan regions.

How can human communities sustain a long-term existence on a small planet? This challenge grows ever more urgent as the threat of global warming increases. Planning for Sustainability presents a wide-ranging, intellectually well-grounded and accessible introduction to the concept of planning for more sustainable and livable communities. The text explores topics such as how more compact and walkable cities and towns might be created, how local ecosystems can be restored, how social inequalities might be reduced, how greenhouse gas emissions might be lowered, and how more sustainable forms of economic development can be brought about. The second edition has been extensively revised and updated throughout, including an improved structure with chapters now organized under three sections: the nature of sustainable planning, issues central to sustainable planning, and scales of sustainable planning. New material includes greater discussion of climate change, urban food systems, the relationships between public health and the urban environment, and international development. Building on past schools of planning theory, Planning for Sustainability lays out a sustainability planning framework that pays special attention to the rapidly evolving institutions and power structures of a globalizing world. By considering in turn each scale of planning—international, national, regional, municipal, neighborhood, and site and building—the book illustrates how sustainability initiatives at different levels can interrelate. Only by weaving together planning initiatives and institutions at different scales, and by integrating efforts across disciplines, can we move towards long-term human and ecological well-being.

Although strategies to prevent global warming – such as by conserving energy, relying on solar and wind power, and reducing motor vehicle use – are well-known, societies have proved unable to implement these measures with the necessary speed. They have also been unwilling to confront underlying issues such as overconsumption, overpopulation, inequity, and dysfunctional political systems. Political and social obstacles have prevented the adoption of improved technologies, which would provide only a partial solution in any case if the fundamental causes of greenhouse gas emissions aren ' t addressed. Climate Change and Social Ecology takes a new approach to the climate crisis, portraying global warming as a challenge of rapid social evolution. This book argues that, in order to address this impending catastrophe and bring about more sustainable development, we must focus on improving social ecology – our values, mind-sets, and social organization. Steps to do this include institutional reforms to improve democracy, educational strategies to encourage public understanding of complex issues, and measures to prevent corporations and the wealthy from shaping societies in other directions instead. This book presents a captivating vision of how to help social systems evolve toward sustainability and explores the social transformations needed for dealing with the climate crisis in the long term. It reviews the climate change strategies considered to date, presents a detailed description of a future sustainable society, and analyzes how this vision might be realized through more conscious public nurturing of our social systems. This interdisciplinary volume provides a compelling rethink of the climate crisis. Authoritative and accessible, it will be of great interest to anyone concerned about climate change and sustainability challenges and is essential reading for students, professionals, and general readers alike.

This collection of essays is a current and comprehensive review of what scientists and scholars know about WMD terrorism and America's options for confronting it. Complete with mathematical methods for analyzing terrorist threats and allocating defense resources, this multidisciplinary perspective addresses all forms and defenses of WMD, and the role of domestic U.S. politics in shaping defense investments and policies. Also identified are multiple instances in which the conventional wisdom is incomplete or misleading.

Building on the success of its second edition, the third edition of the Sustainable Urban Development Reader provides a generous selection of classic and contemporary readings giving a broad introduction to this topic. It begins by tracing the roots of the sustainable development concept in the nineteenth and twentieth centuries, before presenting readings on a number of dimensions of the sustainability concept. Topics covered include land use and urban design, transportation, ecological planning and restoration, energy and materials use, economic development, social and environmental justice, and green architecture and building. All sections have a concise editorial introduction that places the selection in context and suggests further reading. Additional sections cover tools for sustainable development, international sustainable development, visions of sustainable community and case studies from around the world. The book also includes educational exercises for individuals, university classes, or community groups, and an extensive list of recommended readings. The anthology remains unique in presenting a broad array of classic and contemporary readings in this field, each with a concise introduction placing it within the context of this evolving discourse. The Sustainable Urban Development Reader presents an authoritative overview of the field using original sources in a highly readable format for university classes in urban studies, environmental studies, the social sciences, and related fields. It also makes a wide range of sustainable urban planning-related material available to the public in a clear and accessible way, forming an indispensable resource for anyone interested in the future of urban environments.

The single most useful resource out there on how to build and grow sustainable places The need to make our communities sustainable is more urgent than ever before. Toward Sustainable Communities remains the single most useful resource for creating vibrant, healthy, equitable, economically viable places. This comprehensive update of the classic text presents a leading-edge overview of sustainability in a new fully illustrated, full-color format. Compelling new case studies and expanded treatment of sustainability in rural as well as urban settings are complemented by contributions from a range of experts around the world, demonstrating how "community capital" can be leveraged to meet the needs of cities and towns for: Energy efficiency, waste reduction, and recycling Water, sewage, transportation, and housing Climate change and air quality Land use and urban planning. Fully supported by a complete suite of online resources and tools, Toward Sustainable Communities is packed with concrete, innovative solutions to a host of municipal challenges. Required reading for policymakers, educators, social enterprises, and engaged citizens, this "living book" will appeal to anyone concerned about community sustainability and a livable future. Mark Roseland is director of the Centre for Sustainable Community Development at Simon Fraser University and professor at SFU's School of Resource and Environmental Management. He lectures internationally, advises communities and governments on sustainable development policy and planning, and has been cited as one of British Columbia's "top fifty living public intellectuals."

It passes for an unassailable truth that the slave past provides an explanatory prism for understanding the black political present. In None Like Us Stephen Best reappraises what he calls " melancholy historicism "—a kind of crime scene investigation in which the forensic imagination is directed toward the recovery of a " we " at the point of " our " violent origin. Best argues that there is and can be no " we " following from such a time and place, that black identity is constituted in and through negation, taking inspiration from David Walker ' s prayer that " none like us may ever live again until time shall be no more. " Best draws out the connections between a sense of impossible black sociality and strains of negativity that have operated under the sign of queer. In None Like Us the art of El Anatsui and Mark Bradford, the literature of Toni Morrison and Gwendolyn Brooks, even rumors in the archive, evidence an apocalyptic aesthetics, or self-eclipse, which opens the circuits between past and present and thus charts a queer future for black study.
