A roadmap requires regular attention: Roadmap building needs to be regularly exercised–not just once a year. Creating value for the customer is not about sticking to a plan, but being able to respond to change. The roadmap tool question is overrated: You don't need a tool to create a product roadmap. Whiteboards and index cards are just fine, as are Google Apps, Murals, Keynote, or Excel–whatever you feel comfortable with.

The Start-to-Finish, Best-Practice Guide to Implementing and Using DITA Darwin Information Typing Architecture (DITA) is today's most powerful toolbox for constructing information. By implementing DITA, organizations can gain more value from their technical documentation than ever before. Now, three DITA pioneers offer the first complete roadmap for successful DITA adoption, implementation, and usage. Drawing on years of experience helping large organizations adopt DITA, the authors answer crucial questions the "official" DITA documents ignore, including: Where do you start? What should you know up front? What are the pitfalls in implementing DITA? How can you avoid those pitfalls? The authors begin with topic-based writing, presenting proven best practices for developing effective topics and short descriptions. Next, they address content architecture, including how best to set up and implement DITA maps, linking strategies, metadata, conditional processing, and content reuse. Finally, they offer "in the trenches" solutions for ensuring quality implementations, including guidance on content conversion. Coverage includes: Knowing how and when to use each DITA element–and when not to Writing "minimalist," task-oriented information that quickly meets users' needs Creating effective task, concept, and reference topics for any product, technology, or service Writing effective short descriptions that work well in all contexts Structuring DITA maps to bind topics together and provide superior navigation Using links to create information webs that improve retrievability and navigation Gaining benefits from metadata without getting lost in complexity Using conditional processing to eliminate redundancy and rework Systematically promoting reuse to improve quality and reduce costs Planning, resourcing, and executing effective content conversion Improving quality by editing DITA content and XML markup; If you're a writer, editor, information architect, manager, or consultant who evaluates, deploys, or uses DITA, this book will guide you all the way to success. ISO/IEC 20000 is the corporate standard for achieving quality within IT Service Management. As individuals achieve success in Service Management frameworks such as ITIL®, many organizations have identified the benefits of making the jump to full corporate accreditation. But, having made the decision to invest in this standard, what is the best way to implement adoption in an efficient and successful way? This thorough, practical guide has been put together by real experts with real experience of how ISO/IEC 20000 works in the workplace and in the real world. Part A of this title covers the step by step description of the ISO 20000 implementation process. Part B contains real case studies from organizations who have successfully achieved ISO/IEC accreditation. This Official ITSMF guide is unique in that it not only describes the implementation process. It also suggests solutions to common problems and set-backs. An understanding of the many business pressures means that practical guidance on the business case, measuring success (or not), or the need for quick wins are all included in this book, making it an invaluable companion for all those working on an implementation project. A sister guide to the hugely successful Official ITSMF "Introduction to ISO/IEC 20000" book, readers will find that this book becomes a key asset in delivering a practical, down to earth implementation program. Foreword by John Stewart of GGC.

Progressive increases in consumer demands along with aggressive industrial consumption led the world to proximate resource depletion, weather changes, soil and air degradation and water quality deterioration. We now know that the paradigm of production at the expense of human condition is not sustainable. This book briefly explains how we reached this situation and offers suggestions as to what can be done to overcome it. It invites the best entrepreneurial talent and scientific and technological know-how to develop a sustainable economy around sustainable communities, services, and sectors. A major obstacle previously identified by involved parties was the ability of accommodating for the emerging economic growth without causing harm to the environment, especially with resource depletion. This book provides the solution by creating a need to bring on a new revolution that preserves the rights of next generations to live in a healthy environment This Sustainability Revolution requires the integration of economic, environmental, and social factor as well as the practical aspects of implementing sustainability through green activities, which are discussed throughout the book. In this book, a globalization is proposed that encourages creativity and innovation towards sustainability. With this global sustainability approach (real globalization) both rich and poor will benefit from the global sustainability approach. This will close the gap between rich and poor. Developing countries could reap the benefit of current technology without undergoing many of the growing pains associated with development of these technologies. Governments are able to better work together towards common goals now that there is an advantage in cooperation, an improved ability to interact and coordinate, and a global awareness of issues. The book presents a sustainability roadmap to bring together various concepts, that have been dealt with independently by previous authors, and link them to establish the fundamental practical steps. The flow path and the direction for successful implementation of a sustainability roadmap are also discussed in detail in the book. For the first time, the authors use sustainable communities to create a better quality of life for residents while minimizing the use of the resources to meet current needs and ensure adequate resources for future generations. These green communities create new industries for the local economy and improve public health, which offers more hope for their citizens. Sustainable transportation, renewable energy, recycling, clean water, and urban forests help to make a more livable community and help to control the global climate change. They involve all citizens and incorporate local values into decision-making.
