At Dwell, we're staging a minor revolution. We think that it's possible to live in a house or apartment by a bold modern architect, to own furniture and products that are exceptionally well designed, and still be a regular human being. We think that good design is an integral part of real life. And that real life has been conspicuous by its absence in most design and architecture magazines.

Industry and commerce use vast amounts of water and in some parts of the world water is becoming a scarce commodity. We need to take more care in our future use of water, and this book is a 'best practices' manual for industrial and commercial users world-wide. It offers a practical account of the measures which can be taken to re-educate industrial and commercial users in the techniques of water saving and re-use anywhere in the world. The principles are covered in detail and supported by examples from specific industries and commercial operations. Author Mohan Seneviratne is Manager of Sydney Water's 'Every Drop Counts Business Program', which won the prestigious 2006 Stockholm Industry Water Award in recognition of how the utility is working in partnership with business, industry and government to help ensure the long-term sustainability of Sydney's water supply. * The first book to cover water conservation for industrial users from processing plants to pubs and clubs * Provides practical advice on implementing water conservation for users in various industry sectors * Written by a practicing water conservation consultant

Keep your lawn and garden lush without wasting resources by capturing and recycling the greywater that drains from your sink, shower, and washing machine. This accessible and detailed guide walks you through each step of planning for and installing a variety of greywater systems, including laundry-to-landscape and branched drain gravity-fed systems. After identifying greywater sources in your home and estimating flow rate, you'll learn to pinpoint where to redirect the wastewater for the greatest benefit. No matter which system you decide to build, you'll have the information to construct it yourself or move forward with confidence to hire a professional.

The leading industry association's handbook for going green in the kitchen and bath Kitchen & Bath Sustainable Design is the National Kitchen and Bath Association's complete guide to "greening" these important rooms. The first book to focus exclusively on kitchen and bath sustainability, this full color guide covers every consideration for both remodels and new construction, making it a handy reference for any kitchen and bath professional. Case studies of award-winning projects demonstrate how space, budget, and sustainability can come together to create beautiful, functional, efficient rooms, and illustrations throughout provide visual examples of the techniques discussed. The book includes information on greening one's practice for the client's benefit, plus an appendix of additional resources and instructional materials for classroom use. Outside of general heating and cooling, kitchen appliances use the bulk of a household's energy. Kitchens and baths together use an average of 300 gallons of water per day for a family of four, and both rooms are high-use areas that require good air quality. Kitchen & Bath Sustainable Design provides a handbook to designing these rooms for sustainability, without sacrificing comfort or livability. With comprehensive guidance on approaching these rooms sustainably, readers will: Communicate better with builders, clients, and potential clients Understand technical considerations, and the criteria that make a design "green" Conduct a full design analysis, including life cycle costing and efficiency Learn the ratings systems and standards in play in the green kitchen and bath The biggest elements of sustainable interior design—energy efficiency, water use, and materials selection—are all major players in the kitchen and bath. Clients are increasingly demanding attention to sustainability issues, and designers must be up to date on the latest guidelines, best practices, and technology. Kitchen & Bath Sustainable Design is the complete technical and practical guide to green design for the kitchen and bath professional.

Combining humor and memorable anecdotes, five famous ecotourist destinations offer a breathtaking backdrop to better understanding climate change. Crossing the far corners of the globe, Tales of an Ecotourist showcases travel, from the hot and humid Amazon jungle to the frozen but dry Antarctic, as a simple yet spellbinding lens to better understand the complex issue of climate change. At its core, climate change is an issue few truly understand, in large part due to its dizzying array of scientific, economic, cultural, social, and political variables. Using both keen humor and memorable anecdotes, while weaving respected scientific studies along the way, Mike Gunter Jr. transports the reader to five famous ecotourist destinations, from the Galapagos Islands to the Great Barrier Reef, revealing firsthand the increasing threats of climate change. Part travelogue, part current events exposé, with a healthy dose of history, ecology, and politics, these tales of ecoadventure tackle such obstacles head on while fleshing out much-needed personal context to perhaps society's greatest threat of all. "Gunter takes us to the far corners of the globe to understand the lived experience of climate change. More than a travelogue, Tales of an Ecotourist explains how getting outside—out of our houses, immediate surroundings, and comfort zones—can awaken all of us to the realities and urgency of a warming world. This is a rich, beautifully written, and compelling book." — Paul Wapner, author of Living Through the End of Nature: The Future of American Environmentalism "In Tales of an Ecotourist Mike Gunter Jr. takes you on a remarkable journey, both figuratively and literally, as he recounts his experiences visiting some of the most amazing places on our planet. As a genuine, true-to-principles ecotourist, he has an important lesson for us: If we are to veer from our current path of global environmental degradation, we will have to come to appreciate firsthand its remarkable wonder and beauty." — Michael E. Mann, coauthor of The Medhouse Effect: How Climate Change Denial Is Threatening Our Planet, Destroying Our Politics, and Driving Us Crazy
