The creation of new lexical units and patterns has been studied in different research frameworks, focusing on either system-internal or system-external aspects, from which no comprehensive view has emerged. The volume aims to fill this gap by studying dynamic processes in the lexicon – understood in a wide sense as not being necessarily limited to the word level – by bringing together approaches directed to morphological productivity as well as approaches analyzing general types of lexical innovation and the role of discourse-related factors. The papers deal with ongoing changes as well as with historical processes of change in different languages and reflect on patterns and specific subtypes of lexical innovation as well as on their external conditions and the speakers' motivations for innovating. Moreover, the diffusion and conventionalization of innovations will be addressed. In this way, the volume

contributes to understanding the complex interplay of structural, cognitive and functional factors in the lexicon as a highly dynamic domain.

In *The Making of Capitalism in France*, Xavier Lafrance offers the first thorough analysis of the origins of French capitalism, understood as distinct type of historical society and implying a new mode of class exploitation.

Long and recurring illnesses have burdened sick people and their doctors since ancient times, but until recently the concept of "chronic disease" had limited significance. Even lingering diseases like tuberculosis, a leading cause of mortality, did not inspire dedicated public health activities until the later decades of the nineteenth century, when it became understood as a treatable infectious disease. Historian of medicine George Weisz analyzes why the idea of chronic disease assumed critical importance in the twentieth century and how it acquired new meaning as one of the most serious problems facing national healthcare systems. *Chronic Disease in the Twentieth Century* challenges the conventional wisdom that the concept of chronic disease emerged because medicine's ability to cure infectious disease led to changing patterns of disease. Instead, it suggests, the concept was constructed and has evolved to serve a variety of political and social purposes. How and why the concept developed differently in the United States, the United Kingdom, and France are central concerns of this work. In the United States, anxiety about chronic disease spread early in the twentieth century and was transformed in the 1950s and 1960s into a national crisis that helped shape healthcare reform. In the United Kingdom, the concept emerged only after World War II, was associated almost exclusively with proper medical care for the elderly population, and became closely linked to the development of geriatrics as a specialty. In France, the problems of elderly and infirm people were handled as technical and administrative matters until the 1950s and 1960s, when medical treatment of elderly people emerged as a subset of their wider social marginality. While an international consensus now exists regarding a chronic disease crisis that demands better forms of disease management, the different paths taken by these countries during the twentieth century continue to exert profound influence. This book seeks to explain why, among the innumerable problems faced by societies, some problems in some places become viewed as critical public issues that shape health policy.
