Brake control. If you do stop, it is now when the handbrake step disappears from the routine. Basically, you put your clutch down and brake as normal, but instead of putting the car into first gear and putting the handbrake on, you just keep your foot on the foot-brake and the car will already be in first gear from when you were approaching the junction.

~~Industrial Clutch & Brake Power Control Manufacturer ...~~

Typically, manual cars will have three pedals: clutch, brake and accelerator (in that order, left to right). The brake and accelerator pedals are pretty simple - press the brake to slow down (the firmer you press it, the quicker you'll lose speed), while using the accelerator increases the engine's revs and causes you to speed up (the firmer you press it, the quicker you will speed up).

~~Force Control Clutches & Brakes with Oil Shear Technology~~

Clutch control is controlling the speed of the car when driving slowly (below 5mph) with the clutch and gas pedal. Clutch control is one of the hardest parts to master for most people when they're learning to drive a manual/stick shift car. You'll feel at one with the car once you've mastered it though and in complete control of the car at slow speeds.

~~Clutch control in traffic and on a hill - World Driving~~

Clutch control is a technique that allows a driver to control a cars speed. Learning clutch control is essential for passing the driving test as you may be required to demonstrate hill starts to the driving examiner, plus the driving manoeuvres require a high level of clutch control by keeping the car incredibly slow. Learning clutch control for the first time should be done on a flat, even and quiet road.
