10 Best Clinics for Critical Care in India [2020 Prices]

Critical care practices in India have evolved significantly over the past decade. Critical care initially began as a service in major hospitals, but with the formation of the Indian Society of Critical Care Medicine the development of this speciality has been very rapid. Regular conferences, updates, continuing medical education programmes and workshops have emerged, and postdoctoral training programmes have been developed.

Best Critical Care Specialist in India - Verified Doctors ...

In India, critical care is not organised as a system. The reason lies in a disintegrated health care system, across public and private, and across levels of care which do not speak to each other. Many ICUs in India lack basic equipment. For example, in 10% of ICUs in MP, even the basic Blood Gas analysers were not available.

Coronavirus in India: Inside a Mumbai hospital ICU - BBC News

The increase in patient demand for critical care services, caused by the aging population and advances in medicine that extend life expectancy has put a tremendous strain on critical care¹. Delivering high quality critical care to your patients with limited staff and financial resources demands new approaches and thinking in today's complex healthcare environment.

Textbook of Critical Care is an extensive two volume guide to all aspects of critical care. The first volume covers systems of the human body in individual sections; the second volume continues to cover other vital topics for those working in an intensive care unit. With over 100 international contributors ensuring authoritative content throughout, and full colour illustrations across 1500 pages, Textbook of Critical Care is a valuable resource for residents, intensivists, and emergency medicine doctors.

Millions of children are dying each year with preventable and reversible critical illness, including circulatory shock and respiratory failure. According to the World Health Organization, in 2015, the under-five mortality rate in low-income countries was 76 deaths per 1000 live births – about 11 times the average rate in high-income countries (7 deaths per 1000 live births). There is limited data about the nature of the delivery of critical care in resource-limited regions. The care of critically ill children in low-resource settings is challenging, contributing factors include limitations in the existing infrastructure, lack of resources, and low numbers of appropriately trained healthcare workers. Meeting these challenges requires clinical evidence pertinent to the local settings, adequate number of well-trained personnel, quality improvement activities, and the ongoing development of preventative measures. In addition, approaches to prevent worsening critical illness in at-risk hospitalized patients are needed. We are presenting 15 state-of-the art manuscripts from international experts, from all settings, involved in the care of critically ill children in resource-limited settings. This collection of manuscripts covers topics including education, research, clinical experience and infectious diseases. We hope that we are providing a window into the future of critical care delivery for all children around the world.

In consultation with Consulting Editor, Dr. Cynthia Bautista, Guest Editor Christi Delemos has created an issue of Critical Care Nursing Clinics that gives the readers an opportunity to discover critical care nursing practices from critical care nurses around the world. Authors will have the opportunity to share the contributions of critical care nurses to health care globally. Current challenges in managing critical care patients anywhere in the world are discussed; articles are specifically devoted to ICU Nursing Priorities in the United States; Caring for Traumatic Brain Injury Patients: Australian Nursing Perspectives; Use of Diaries in ICU Delirium Patients: German Nursing Perspectives; Caring for Patients with Aneurysmal Subarachnoid Hemorrhage: Nursing Perspectives from the UK; Critical Care Nursing in India; Nursing Priorities in Critical Care Nursing in the Philippines; The Glasgow Coma Scale: A European and Global Perspective on Enhancing Practice; and Care of the Patient with Acquired Brain Injury in Latin America and the Caribbean. Readers will come away with new perspectives of care for the critical care patient.

This is the first comprehensive book published from India which is based on MCQs, primarily for doctors appearing for competitive exams in critical care medicine. It is also a must have for every doctor and nurse working in the ICU, as the case scenarios and latest recommendations will help them to have a better approach towards complex situations and provide better care to the patients.

The syllabus for intensive care medicine is constantly evolving and thus can not to be defined easily. An intensivist needs to learn many complex therapies and investigative modalities which are originally a part of other specialties. This poses a challenge for students who are preparing various examination like EDIC, DNB, DM, IFCCM, IDCCM, CTCM, CICM etc. This book compiles 112 carefully selected objective structural clinical examination (OSCE) related to data interpretation, trouble shooting and diagnosis using various investigative modalities. Answers to the OSCE are explained in a lucid way. It aims to assist students appearing in various critical examinations in a smart and time conserving manner. Since knowledge of research methodology has become an integral part of critical care examination, a whole chapter has been dedicated to the critical appraisal of a published trial. There is a strong focus on

providing updated evidences. The book is reviewed and updated every time a new credible evidence emerges. This comprehensive, concise and readable book is indeed a useful companion to anyone who works in intensive care unit.

Perioperative care is the care that is given before and after surgery. This textbook is a complete guide to the anaesthetic and critical care management of patients undergoing complex surgeries in all organ systems of the body. Topics cover all age groups – neonates, children, and adults. Divided into 11 sections, the book begins with a general overview of critical care in the perioperative period discussing airway management, pain, fluid and electrolyte therapy, shock, arterial blood gas analysis, respiratory failure and mechanical ventilation, and thromboembolism. The following sections cover surgeries in different organ systems and patient groups – cardiothoracic and vascular, neurosciences, paediatrics, obstetrics and gynaecology, gastrointestinal, genitourinary, orthopaedics, head and neck, and transplantation. The final section explains selected miscellaneous topics including nutrition, haemodynamic monitoring, echocardiography, renal replacement therapy, and antibiotics. Compiling 700 pages, the comprehensive text is further enhanced by clinical photographs, diagrams and tables. Key points Comprehensive guide to perioperative critical care in neonates, children and adults Covers complex surgeries in all organ systems Includes discussion on imaging, airway management, and ventilation Highly illustrated with clinical photographs, diagrams and tables
