This book provides an unparalleled insider's look at the factors leading up to the 1997-98 crisis in South Korea and how the crisis unfolded over the next two years. Written by former finance minister Kyu-Sung Lee, this book traces the evolving situation across the key sectors and the series of policy and institutional measures the government deployed throughout the crisis. This book is a must-read for policymakers, scholars, students, and any reader interested in understanding the facts and circumstances surrounding the 1997-98 crisis, the policies undertaken at the time, and what the experience implies for preventing future crises.

Tells how clutches & transmissions work - gear, friction, & hydrostatic. Gives basics of service & repair of major types of drives, transmission, transaxles, & clutches used in compact equipment. Includes troubleshooting guides. It provides the reader with a list of skills & knowledge that should be learned with each chapter. CONTENTS: Basic principles, clutches, mechanical transmissions, hydrostatic transmissions, belt & chain drives, differentials, final drives, power take-offs, service & maintenance & troubleshooting.

This report analyzes four key aspects of US and Iranian strategic competition--sanctions, energy, arms control, and regime change. Its primary focus is on the ways in which the sanctions applied to Iran have changed US and Iranian competition since the fall of 2011.

What are the challenges that small countries face concerning innovation and what are the effects of globalization on their innovation systems? In this very interesting, rich and timely book, Edquist and Hommen compare ten different small national innovation systems from the Asia Pacific and Northern Europe that are rather advanced in their development. The answers that the authors give are convincing and relate not only to the unique characteristics of each national system that shapes innovative activity, but also to some commonalities that exist across these countries. Franco Malerba, Bocconi University, Italy This major book presents case studies of ten small country national systems of innovation (NSIs) in Europe and Asia, namely, Denmark, Finland, Hong Kong, Ireland, the Netherlands, Norway, Singapore, South Korea, Sweden and Taiwan. These cases have been carefully selected as examples of success within the context of globalization and as new economies where competition is increasingly based on innovation. To facilitate comparative analysis the ten studies follow a common structure, informed by an activities-based approach to describing and analysing NSIs, which addresses the critical issues of globalization and the consequences of innovation for economic performance. The final chapter compares fast growth and slow growth countries, concentrating on issues of innovation policy. The results illustrate the usefulness of an activities-based approach to studying NSIs, point to distinctive national roles within an increasingly differentiated international division of labour and address the key themes of selectivity and coordination in innovation policy. This valuable book presents one of the most significant, comprehensive and comparative country studies of NSIs in the last decade. It will have great import and should be widely read by every serious student and scholar of innovation studies.

The World Investment Report series provides the latest data and analysis foreign direct investment (FDI) and other activities of transnational corporations, as well as the policies to regulate them at the national and international levels. It aims to analyse the cross-border activities of translational corporations and related policy measures with a view to helping policymakers formulate appropriate policy responses.

This electronic version has been made available under a Creative Commons (BY-NC-ND) open access license. The Asian financial crisis of 1997-98 shook the foundations of the global economy and what began as a localised currency crisis soon engulfed the entire Asian region. What went wrong and how did the Asian economies long considered 'miracles' respond? How did the United States, Japan and other G-7 countries respond to the crisis? What role did the IMF play?. Why did China, which suffers many of the same structural problems responsible for the crisis remain conspicuously insulated from the turmoil raging in its midst?. What explains the remarkable recovery now underway in Asia? In what fundamental ways did the Asian crisis serve as a catalyst to the current thinking about the "new international financial architecture"?. This book provides answers to all the above questions and more, and gives a comprehensive account of how the international economic order operates, examines its strengths and weaknesses, and what needs to be done to fix it.

This book constitutes the refereed proceedings of the 19th International Conference on CParallel and Distributed Computing, Applications and Technologies, PDCAT 2018, held in Jeju Island, South Korea, in August 2018. The 35 revised full papers presented along with the 14 short papers and were carefully reviewed and selected from 150 submissions. The papers of this volume are organized in topical sections on wired and wireless communication systems, high dimensional data representation and processing, networks and information security, computing techniques for efficient networks design, electronic circuits for communication systems.

South Korea has been quietly growing into a major economic force, even challenging Japan in some industries. This growth may be seen as an example of "late industrialization" and this book discusses this point.
