Updated to incorporate the latest features, tools, and functions of the new version of the popular word processing software, a detailed manual explains all the basics, as well as how to create sophisticated page layouts, insert forms and tables, use graphics, and create book-length documents with outlines and Master Documents. Original. (All Users)

Missing data pose challenges to real-life data analysis. Simple ad-hoc fixes, like deletion or mean imputation, only work under highly restrictive conditions, which are often not met in practice. Multiple imputation replaces each missing value by multiple plausible values. The variability between these replacements reflects our ignorance of the true (but missing) value. Each of the completed data set is then analyzed by standard methods, and the results are pooled to obtain unbiased estimates with correct confidence intervals. Multiple imputation is a general approach that also inspires novel solutions to old problems by reformulating the task at hand as a missing-data problem. This is the second edition of a popular book on multiple imputation, focused on explaining the application of methods through detailed worked examples using the MICE package as developed by the author. This new edition incorporates the recent developments in this fast-moving field. This class-tested book avoids mathematical and technical details as much as possible: formulas are accompanied by verbal statements that explain the formula in accessible terms. The book sharpens the reader's intuition on how to think about missing data, and provides all the tools needed to execute a well-grounded quantitative analysis in the presence of missing data.

Larman covers how to investigate requirements, create solutions and then translate designs into code, showing developers how to make practical use of the most significant recent developments. A summary of UML notation is included

Our Cats and All about Them - Their Varieties, Habits, and Management and for Show, the Standard of Excellence and beauty - By Harrison Weir. Originally published in 1889 this rare book has long been considered a classic among cat books. It is now very hard to find in its first edition. Read Country Books have republished it, using the original text and illustrations as part of their History of the Cat series. The author spent over fifty years carefully researching the history, and observing the nature of the cat in preparation for writing this important work. He noted their habits, watched their ways and found lasting pleasure in their companionship. The book abounds with Harrison Weir's beautiful engravings of cat varieties and associated subjects. Two hundred and sixty pages contain many comprehensive chapters on the ways of the cat, its habits, instincts, peculiarities, usefulness, colours, markings, forms, etc. Other chapters deal with the folk and other lore, including superstitions and proverbs, both ancient and modern, connected with the cat. Of much interest to the serious cat enthusiast will be the notes and descriptions on the various varieties of cat: Long Haired Cats The Angora, The Persian Cat, The Russian Long Haired Cat, The Tortoiseshell Cat, Tabby Cats, The Abyssinian, White Cats, Black Cats, Manx Cats, and Various Others. Also included is information on breeding, mating, diseases, showing, points etc. This is a fascinating and well illustrated read for any cat lover or historian of the breeds, but also contains much information that is still useful and practical today. Many of the earliest cat books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. Read Country Books are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.
