The Portable, Extensible Toolkit for Scientific Computation (PETSc) is an open-source library of advanced data structures and methods for solving linear and nonlinear equations and for managing discretizations. This book uses these modern numerical tools to demonstrate how to solve nonlinear partial differential equations (PDEs) in parallel. It starts from key mathematical concepts, such as Krylov space methods, preconditioning, multigrid, and Newton's method. In PETSc these components are composed at run time into fast solvers. Discretizations are introduced from the beginning, with an emphasis on finite difference and finite element methodologies. The example C programs of the first 12 chapters, listed on the inside front cover, solve (mostly) elliptic and parabolic PDE problems. Discretization leads to large, sparse, and generally nonlinear systems of algebraic equations. For such problems, mathematical solver concepts are explained and illustrated through the examples, with sufficient context to speed further development. PETSc for Partial Differential Equations addresses both discretizations and fast solvers for PDEs, emphasizing practice more than theory. Well-structured examples lead to run-time choices that result in high solver performance and parallel scalability. The last two chapters build on the reader's understanding of fast solver concepts when applying the Firedrake Python finite element solver library. This textbook, the first to cover PETSc programming for nonlinear PDEs, provides an on-ramp for graduate students and researchers to a major area of high-performance computing for science and engineering. It is suitable as a supplement for courses in scientific computing or numerical methods for differential equations.

Julius Caesar Augustus, founder of the early Roman Empire, replaced the estate of the late Roman Republic and raised taxes in conjunction with the glorious incarnation of Christ. Christ's ministry lasted the few days of three and a half years, culminating in his atoning death for the kingdom of sinful human nature. Humanity in faith was individually summoned to accept Christ as the antitypical lamb of God, which takes away the sin of the world in fulfilment of Gen. 3:15. Systems of faith/belief arms would develop for believers to join. Wars of words broke out between churches and civil states regarding the nature of Christ and other traditions. Some systems of faith/belief operated within the Ten Commandments hedge, while others did not. Roman Catholicism did not operate within that hedge, disregarding the fourth commandment, thus showing contempt for the law. Believers in the Dark Ages, Middle Ages, Reformation, and post-Reformation eras broke away from the Roman Catholic Church system to follow Bible truth, causing people to give their lives and even die for their faith.

An easy-to-read, pocket-sized primer on brief coaching basics. This is a highly practical and condensed introduction to solution-focused coaching, offering a simple and clear structure for coaching sessions that is easy to learn. Content is illuminated through exemplary dialogues from real coaching sessions and bullet-point toolboxes for greater variety of choice. Narrative explanations create a helpful framework for understanding the general idea of coaching and the practicalities of the solution focused approach. Several illustrating graphs and symbols give the book an easy to read, light touch. The book targets beginners in coaching who are looking for simple guidance and step-by-step ideas in their learning process. Topics include: What is coaching? □ Coaching□simple, concise and effective □ Overview: Major elements of the coaching conversation □ Contracting□before you start □ Coaching agreement for the first session □ Preferred Future □ Resources and forerunners of solutions □ Small steps and clues of upcoming progress □ Session conclusion □ Follow-up sessions □ Brief coaching of executives□three examples □ Beyond technique□continuous learning as a coach

The Holocaust - the murder of Europe's Jews by Nazi Germany - has too often been depicted in isolation by its historians. The Final Solution: a Genocide is the first study to combine a detailed re-appraisal of the development of the genocide of the Jews with full consideration of Nazi policies against other population groups, and a comparative analysis of other modern genocides. Moving beyond a narrow focus on Nazi Germany, Donald Bloxham provides a broadperspective on a whole continent in crisis from the late nineteenth century onwards and considers the Holocaust as the culmination of a much wider history of European genocide and ethnic cleansing. Ultimately, he shows that an explanation for the Holocaust rooted exclusively in Nazism and antisemitism isnecessarily inadequate when set against one prepared to give due weight to the immediate circumstances of the Second World War in eastern Europe, and to situate the Jewish genocide within the broader patterns of human behaviour in the late-modern world.

Called the "bible of applied statistics," the first two editions of the Handbook of Parametric and Nonparametric Statistical Procedures were unsurpassed in accessibility, practicality, and scope. Now author David Sheskin has gone several steps further and added even more tests, more examples, and more background information-more than 200 pages of n
