This collection of essays highlights, in a new, critical fashion, some of the classic questions in life science. These include "what is life?"; "what is death?"; "what is consciousness?"; "why is life cellular?"; and "why are enzymes macromolecules?". It also explores whether evolution is pre-determined, whether science and spirituality can harmonize with each other, whether artificial intelligence is at odds with the human spirit, and whether, and to what extent, we are genetically determined. In this text, some of the main conceptual tools used to tackle life's many aspects are necessarily reviewed, such as the systems view of life, the notion of contingency, and the concept of autopoiesis. Each of the three chapters of the book contains a number of short science fiction stories which discuss aspects of the present-day development of artificial intelligence.

In this moving and controversial Quarterly Essay, doctor and writer Karen Hitchcock investigates the treatment of the elderly and dying through some unforgettable cases. With honesty and deep experience, she looks at end-of-life decisions, frailty and dementia, over-treatment and escalating costs. Ours is a society in which ageism, often disguised, threatens to turn the elderly into a "burden" - difficult, hopeless, expensive and homogenous. While we rightly seek to curb treatment when it is futile, harmful or against a patient's wishes, this can sometimes lead to limits on care that suit the system rather than the person. Doctors may declare a situation hopeless when it may not be so. We must plan for a future when more of us will be old, Hitchcock argues, with the aim of making that time better, not shorter. And we must change our institutions and society to meet the needs of an ageing population. Dear Life is a landmark essay by one of Australia's most powerful writers. "The elderly, the frail are our society. They are our parents and grandparents, our carers and neighbours, and they are every one of us in the not-too-distant future . . . They are not a growing cost to be managed or a burden to be shifted or a horror to be hidden away, but people whose needs require us to change . . ." -Karen Hitchcock, Dear Life

Explores how the concept of 'compound individuality' brought together life scientists working in pre-Darwinian London. This book states that scientists conducting research in comparative anatomy, physiology, cellular microscopy, embryology and the neurosciences repeatedly stated that plants and animals were compounds of smaller independent units.

Medical articles are one of the main vehicles of knowledge translation and evidence communication in the health sciences. Their correct structure and style alone are no longer enough to convey a clear understanding of the intended message. Readers must be able to understand the very essence of the article message. That is the purpose of this book. Writing, Reading, and Understanding in Modern Health Sciences: Medical Articles and Other Forms of Communication will help the authors of medical articles communicate more effectively in today's practice and health research environment. It explores the most effective practices for communicating using three main medical literature formats: through scientific articles, articles where the subject is not based on the practice of the scientific method, and business reports. Describing how to think beyond the prevailing EMRAD article format, this book focuses on the nature, content, domains of thought, and meanings of medical articles. The ideas and underlying propositions in this book are complementary to specific requirements appropriate for each type of medical journal. After reading this book you will better understand: How to write what is considered the most important type of medical article, the research-based medical article How to write an evidence-based argumentative medical article The challenges of clinical case reporting The general framework of medical and research ethics Classification of medical articles and their underlying studies from the causal standpoint Supplying you with the understanding required to write more effective medical articles, the book includes details about essay-type articles, research-based articles, thesis as introduction sections, definitions as part of the material and methods sections, modern argumentation and critical thinking underlying results and their discussion and conclusions about them. It also examines qualitative research and case study methodologies from other domains. A must-read for all writers, readers, and users of medical articles, this book supplies the tools you need to write compelling medical reports that can help to improve the practice, research, and quality of healthcare at all levels.
