Americans are voting with their feet to abandon strip malls and suburban sprawl, embracing instead a new type of community where they can live, work, shop, and play within easy walking distance. In *The Option of Urbanism* visionary developer and strategist Christopher B. Leinberger explains why government policies have tilted the playing field toward one form of development over the last sixty years: the drivable suburb. Rooted in the driving forces of the economy—car manufacturing and the oil industry—this type of growth has fostered the decline of community, contributed to urban decay, increased greenhouse gas emissions, and contributed to the rise in obesity and asthma. Highlighting both the challenges and the opportunities for this type of development, *The Option of Urbanism* shows how the American Dream is shifting to include cities as well as suburbs and how the financial and real estate communities need to respond to build communities that are more environmentally, socially, and financially sustainable.

Water Communication aims at setting a first general outlook at what communication on water means, who communicates and on what topics. Through different examples and based on different research and contributions, this book presents an original first overview of “water communication”. It sets its academic value as one distinct scientific domain and provides tips and practical tools to professionals. The book contributes to avoid mixing messages, targets and discourses when setting communication related to water issues. The book facilitates coordination within the water sector and its organizations as water is a wide field of applications where inadequate words and language understanding between its stakeholders is one of the main obstacles today. Water Communication provides and describes: a general outlook and retrospective of the history of the water sector in terms of communication the landscape of organizations communicating on water and classification of topics the differences between communication, information, mediation, raising awareness examples of communication campaigns on water Water Communication is a vital resource for communication managers, utility managers, policy makers involved in water management and students in water sciences and environment. Colour figures from the book are available to view on the WaterWiki at: <http://www.iwawaterwiki.org/xwiki/bin/view/Articles/WaterCommunicationAnalysisofStrategiesandCampaignsfromtheWaterSector> Editor: Celine Herve-Bazin, Celsa - Sorbonne University, Paris, France

Water supply system is infrastructure for the collection, transmission, treatment, storage, and distribution of water for homes, commercial establishments, industry, and irrigation, as well as for such public needs as firefighting and street flushing. People depend on water for drinking, cooking, washing, carrying away wastes, and other domestic needs. Water supply systems must also meet requirements for public, commercial, and industrial activities. Many efforts on the development of a water supply system have been made through for sustainable water supply. However, the complexity of system limited the site specific application at the first era. As water demands pressures raise increasingly on the existing water supply system, many studies attempted to develop a general water supply system to assist decision makers to design more reliable systems for a long range operation period. These attempts also include the optimization of total system construction and operation cost. In all cases, the water must fulfill both quality and quantity requirements. Water Supply System Analysis - Selected Topics incorporates selected topics on theory, revision, and practical application models for water supply systems analysis, including: guidelines for transient analysis, sustainable management of regional water supply systems, infrastructure asset management, optimal pump scheduling, demand uncertainty, errors in water meter measuring, and indicators for water mains rehabilitation.
