Following QCA's new Scheme of Work for Primary Science, this series takes a sequential development through the primary curriculum for science. The pupil books concentrate on content and comprehension questions; the copymasters offer classroom activities and homework. The series should sell equally well overseas, because of its accessibility and emphasis on progression from age 5 through to age 11.

The third book in a three-level science series covering the lower secondary grades and designed for children in English-medium schools, for whom English is not the first language.

Oxford International Primary Science takes an enquiry-based approach to learning, engaging students in the topics through asking questions that make them think and activities that encourage them to explore and practise. As students progress through the course, they not only learn about science but how to think like a scientist. They learn the language of scientific enquiry, for example the meaning of observe and predict in a scientific context, as well as the important key words for talking about a topic. The topics are explored in careful stages, introducing different aspects at a pace that allows students to absorb and practise what they have learned. Photos, illustrations and diagrams are used to help students explore and understand, and the language is clear and easy for primary children to understand. For the teacher, the Teacher's Guides provide step-by-step notes for each lesson, guiding students through the topic, and supporting students with their language development when needed We are working with Cambridge International Examinations towards endorsement of Oxford International Primary Science

Written by well-respected authors, the suite provides a comprehensive, structured resource which covers the full Cambridge Secondary 1 framework and seamlessly progresses into the next stage. This engaging course supports teaching of the Science framework both theoretically and practically, with full coverage of the Scientific Enquiry framework integrated throughout the series. This Workbook for Stage 8 contains exercises that develop students' ability to apply their knowledge, as well as Scientific Enquiry skills relating to planning experiments and recording results.

The teacher's guide to accompany the third book in a three-level series covering the lower secondary grades and designed for ESL students studying science in English.

This is a brand new coursebook in a three-level lower secondary ESL science programme, designed to boost students' abilities and confidence in science through the medium of English.
