Rainer Thiele deals with chiropractic and examines two questions: Is chiropractic treatment of lower back pain a successful therapeutic approach? Is chiropractic treatment a standard treatment for headaches? On the topic of chiropractic in lower back pain, a congress abstract was published by the author using the latest randomized clinical studies and discussed as a poster contribution to the 16th Congress for Health Services Research in Berlin. A systematic review answers the question about chiropractic treatment of headaches. About the author: Dr. scient. med. Rainer Thiele wrote this work as part of his doctoral studies in medical science at the UFL (Private University of Liechtenstein) as a cumulative dissertation. He is managing director of the specialist practice for Chiropractic / Osteopathy and Sports Medicine in Munich.

Manipulative Therapy provides a systematic overview of chain reactions which are the basis of a rational holistic approach. These reactions are closely related to the upright human posture and to the "deep stabilisation system" as shown in the work of Richardson et al in Therapeutic Exercise for Spinal Stabilisation in Low Back Pain. This approach has meant a considerable advance in the therapy and rehabilitation of patients. It gives a balanced picture of the importance of muscles, joints and soft tissues, under the control of the nervous system, the textbook aims to treat disturbance of function, the most common cause of pain in the motor system, in the most effective way. Locomotor system dysfunctions are shown to be treated very effectively using manual medicine techniques. Spinal column and joint mobility can be restored, and pain triggered by the autonomic nervous system can be positively influenced. This is a comprehensive source of information relating to pathogenesis, diagnosis, indications and treatment methods, incorporating the latest research findings. Radiological diagnosis is shown as laying the foundation for successful diagnosis and treatment with manual medicine techniques. Typical conditions associated with pain in the locomotor system is presented and described in functional terms for the first time. The book concludes with chapters covering preventative aspects and expert assessment. Manipulative Therapy: Musculoskeletal Medicine is the follow on from: Manipulative Therapy in Rehabilitation of the Locomotor System, published by Butterworth Heinemann, 1985.

A textbook that covers Physical concepts at a basic level for manual therapists specifically . Clinicians in general and manual therapists in particular have a need tounderstand certain, specific aspects of physics to an advanced level.However, many lack prior education in this area, with chemistry and biology 'A' levels being emphasized in terms of entrance requirements. Most textbooks aimed at this field concentrate exclusively on the physics underpinning biomechanics, but the level at which these books are pitched is often too high to allow understanding by students who have an inadequate background in the subject. This book acts, in part, as a primer to address this deficit. Students are also required to understand the basic physics underpinning physiology, biochemistry, radiography and therapeutics. This textbook will be a guide to these specialist areas of knowledge. This text will cover biophysics as a core subject to guide the potential clinician from total ignorance to complete mastery in the areas of physics pertinent to manual medicine and its related disciplines.

NATUROPATHIC PHYSICAL MEDICINE provides a philosophical naturopathic perspective, as well as practical clinical applications, for manual and physical approaches to health care. A wide range of bodywork and movement approaches and modalities are evaluated in relation to their ability to be appropriately used in naturopathic treatment and rehabilitation settings. The model of care emphasised in this text recognizes that naturopathically oriented therapeutic interventions usually focus on achieving one or all of the following: enhancement of function so that the person, system or part, can better self-regulate in response to adaptive demands; modification or removal of adaptive load factors; and symptomatic relief without creation of significant additional adaptive changes.
