Businesses are gathering data today at exponential rates and yet few people know how to access it meaningfully. If you ' re a business or IT professional, this short hands-on guide teaches you how to pull and transform data with SQL in significant ways. You will quickly master the fundamentals of SQL and learn how to create your own databases. Author Thomas Nield provides exercises throughout the book to help you practice your newfound SQL skills at home, without having to use a database server environment. Not only will you learn how to use key SQL statements to find and manipulate your data, but you ' ll also discover how to efficiently design and manage databases to meet your needs. You ' ll also learn how to:

- Explore relational databases, including lightweight and centralized models
- Use SQLite and SQLiteStudio to create lightweight databases in minutes
- Query and transform data in meaningful ways by using SELECT, WHERE, GROUP BY, and ORDER BY
- Join tables to get a more complete view of your business data
- Build your own tables and centralized databases by using normalized design principles
- Manage data by learning how to INSERT, DELETE, and

His factory in Roxbury is built in the form of a hollow square, one hundred feet on each side, four stories in height, and employs two hundred workmen. A plot of ground has recently been purchased for the erection of a new and much larger manufactory, capable of accommodating one thousand employees. There are few, if any, industrial establishments more interesting than a manufactory of Watches by machinery. We have carried our readers through many where their wonder would be excited at the size of the machines employed--the ponderous lathes and massive planers of the Marine Engine Shops--but here the tools and machines are miracles of minuteness. The drills for probing the orifice in the jewels, to admit the shaft on which the wheels revolve, are almost as fine as the filaments of a spider's web. The gauges, which are used to measure the correctness of the aperture, are so delicate as to indicate the thirtieth part of a hair or the ten thousandth part of an inch. The cutters, which are employed

to form the teeth of the scape-wheel out of the solid metal, are sapphires, ground down to the proper shape in diamond dust and oil, and then inserted in small wheels or discs, and so fine do they cut that the chips which they can remove are only the thirtieth part of the thickness of a hair, and this infinitesimal portion can be taken from any part of the tooth, so easily are their motions controlled. A coil of wire, weighing a pound and worth about \$5, is divided and worked into three hundred thousand screws, worth \$3,600. These screws, which, to the naked eye, resemble particles of rifle powder, are finished in all respects a..
