What can you do with them? Most of us don't even know how to properly dispose of them. If only there was a way to save them from their untimely fate. Well empty out that drawer and grab a screwdriver because the time has come to bring these old devices back from the grave! Old technology may no longer be useful, but it isn't useless. Hidden inside often-discarded devices is a treasure trove of motors, magnets, screens, and other parts just waiting for a chance to be upcycled! And this type of "upcycling" doesn't mean turning an old CD into a coaster, it means something a little more hardcore, like How to make a great Wi-Fi security camera with an old cell phone · How to make a basic 3D printer out of old computer disk drives · What can be made with the rare-earth magnets inside old hard drives or the reusable LCD screens in old phones · And much more Fans of Popular Science, Smithsonian's Maker Lab, and The Big Book of Makerspace Projects will love Upcycled Technology.

Indonesia is often viewed as a country with substantial natural resources which has achieved solid economic growth since the 1960s, but which still faces serious economic challenges. In 2010, its per capita GDP was only nineteen per cent of that of the Netherlands, and twenty-two per cent of that of Japan. In recent decades, per capita GDP has fallen behind that of neighbouring countries such as Malaysia and Thailand, and behind China. In this accessible but thorough new study, Anne Booth explains the long-term factors which have influenced Indonesian economic performance, taking into account the Dutch colonial legacy and the reaction to it after the transfer of power in 1949. The first part of the book offers a chronological study of economic development from the late nineteenth to the early twenty-first century, while the second part explores topics including the persistence of economic nationalism and the ongoing tensions between Indonesia's diverse regions.
