In September 2011, scientists announced
new experimental findings that would not

only threaten the conduct and publication of influenza research, but would have significant policy and intelligence implications. The findings presented a modified variant of the H5N1 avian influenza virus (hereafter referred to as the H5N1 virus) that was transmissible via aerosol between ferrets. These results

Read PDF Life Science Paper 1 November 2011

suggested a worrisome possibility: the existence of a new airborne and highly lethal H5N1 virus that could cause a deadly global pandemic. In response, a series of international discussions on the nature of dual-use life science arose. These discussions addressed the complex social, technical, political, security, and ethical

issues related to dual-use research. This Research Topic will be devoted to contributions that explore this matrix of issues from a variety of case study and international perspectives.

At the start of the twenty-first century, warnings have been raised in some quarters about how - by intent or by mishap - advances in biotechnology and related fields could aid the spread of disease. Science academics, medical organisations, governments, security analysts, and others are among those that

have sought to raise concern.

EDUCATION AND ETHICS IN THE LIFE SCIENCES examines a variety of attempts to bring greater awareness to security concerns associated with the life sciences. It identifies lessons from practical initiatives across a wide range of national contexts as well as more general

reflections about education and ethics. The eighteen contributors bring together perspectives from a diverse range of fields - including politics, virology, sociology, ethics, security studies, microbiology, and medicine - as well as their experiences in universities, think tanks and government. In offering their assessment about what

must be done and by whom, each chapter addresses a host of challenging practical and conceptual questions. EDUCATION AND ETHICS IN THE LIFE SCIENCES will be of interest to those planning and undertaking training activities in other areas. In asking how education and ethics are being made to matter in an emerging

The Life of Paper offers a wholly original and inspiring analysis of how people facing systematic social dismantling have engaged letter correspondence to remake themselves—from bodily integrity to subjectivity and collective and spiritual being. Exploring the evolution of racism and confinement in California history, this

ambitious investigation disrupts common understandings of the early detention of Chinese migrants (1880s–1920s), the internment of Japanese Americans (1930s–1940s), and the mass incarceration of African Americans (1960s–present) in its meditation on modern development and imprisonment as a way of life. Situating

We normally think of viruses in terms of the devastating diseases they cause, from smallpox to AIDS. But in *The Life of a Virus*, Angela N. H. Creager introduces us

to a plant virus that has taught us much of what we know about all viruses, including the lethal ones, and that also played a crucial role in the development of molecular biology. Focusing on the tobacco mosaic virus (TMV) research conducted in Nobel laureate Wendell Stanley's lab, Creager argues that TMV

She examines how the experimental techniques and instruments Stanley and his colleagues developed for studying TMV were generalized not just to other labs working

The great success of research on TMV also helped justify increased spending on biomedical research in the postwar years (partly through the National Foundation for Infantile Paralysis's March
