Statistics on the translation market consistently identify medicine as a major thematic area as far as volume or translation is concerned. Vicent Montalt and Maria Gonzalez Davis, both experienced translator trainers at Spanish universities, explain the basics of medical translation and ways of teaching and learning how to translate medical texts. Medical Translation Step by Step provides a pedagogical approach to medical translation based on learner and learning-centred teaching tasks, revolving around interaction: pair and group work to carry out the tasks and exercises to practice the points covered. These include work on declarative and operative knowledge of both translation and medical texts and favour an approach that takes into account both the process and product of translations. Starting from a broad communication framework, the book follows a top-down approach to medical translation: communication | genres | texts | terms and other units of specialized knowledge. It is positively focused in that it does not insist on error analysis, but rather on ways of writing good translations and empowering both students and teachers. The text can be used as a course book for students in face-to-face learning, but also in distance and mixed learning situations. It will also be useful for teachers as a resource book, or a core book to be complemented with other materials.

Official translations are generally documents that serve as legally valid instruments. They include anything from certificates of birth, death or marriage through to academic transcripts or legal contracts. This field of translation is now as important as it is fraught with difficulties, for it is only in a few areas that the cultural differences are so acute and the consequences of failure so palpable. In a globalizing world, our official institutions increasingly depend on translations of official documents, but little has been done to elaborate the skills and dilemmas involved. Roberto Mayoral deals with the very practical problems of official translating. He points out the failings of traditional theories in this field and the need for revised concepts such as the virtual document, pragmatic constraints, and risk analysis. He details aspects of the social contexts, ethical norms, translation strategies, different formats, fees, legal formulas, and ways of solving the most frequent problems. Care is taken to address as wide a range of cultural contexts as possible and to stress the active role of the translator. This book is intended as a teaching text for the classroom, for self-learning, or for professionals who want to reflect on their practice. Activities and exercises are suggested for each chapter, and information is included on professional associations and societies across the globe.

Tania Stadsbader wrestled with a balance disorder for 15 years before undergoing an operation that cured her of her condition. In this book, she looks back on her long search for a proper diagnosis, and on the impact of her years of illness. She tells her story directly and clearly, and also gives a voice to many of her fellow sufferers. Professor Floris Wuyts adds a scientific viewpoint and presents the most up-to-date discoveries from the field of vestibular research. The groundbreaking combination of patients' and professionals' voices makes this volume unique of its type.

Focusing on the problems of translating English legal language, Alcaraz and Hughes offer a wide-ranging view of one of the most demanding and vital areas of contemporary translation practice. Individual chapters deal with legal English as a linguistic system, special concepts in the translation of legal English, the genres of legal translation, and offer a series of practical problems together with discussions of proposed solutions, as well as insight into the pragmatic ways translators go about finding solutions. The numerous examples and discussions of specific terms make the book useful both as a manual in the translation class and as an invaluable reference work for students, teachers, self-learners and professional translators.

The Routledge Handbook of Translation and Education will present the state of the art of the place and role of translation in educational contexts worldwide. It lays a sound foundation for the future interdisciplinary cooperation between Translation Studies and Educational Linguistics. By adopting a transdisciplinary perspective, the handbook will bring together the various fields of scholarly enquiry and practice that make a valuable contribution to enlarging the notion of translation and diversifying its uses in education. Each contribution provides an overview of the historical background to a given educational setting. Focusing on current research approaches and empirical findings, this volume outlines the development of pedagogical approaches, methods, assessment and curriculum design. The handbook also examines examples of pedagogies that integrate translation in the curriculum, the teaching method's approach, design and procedure as well as assessment. Based on a multilingual and applied-oriented approach, the handbook is essential reading for postgraduate students, researchers and advanced undergraduate students of Translation Studies, and educationalists and educators in the 21st century post-global era.

Situated Learning is generally understood as a context-dependent approach to translator and interpreter training under which learners are exposed to real-life and/or highly simulated collaborative work environments and tasks, both inside and outside the classroom. Ultimately, Situated Learning seeks to enhance learners' capacity to think and act like professionals. This book sets out to gauge the extent to which different factors influence the implementation of Situated Learning models in various teaching and learning contexts. It presents an understanding of Situated Learning that goes beyond previous interpretations of this notion, traditionally dominated by the discussion of pedagogical practices in authentic, i.e. real-world, or semi-authentic professional settings. This wider remit of Situated Learning encompasses previously underrepresented contextual factors pertaining to translation traditions, historical trends, community beliefs and customs, socio-economic constraints, market conditions, institutional practices, budgetary issues, or resource availability. The pedagogical considerations of these key aspects make this book particularly useful for both novice and seasoned teachers of translation and interpreting with an interest in informed practical advice on how to implement the principles of Situated Learning in collaborative teaching and learning environments that seek to promote translators' and/or interpreters' professional competence. This book was originally published as a special issue of The Interpreter and Translator Trainer.
