In the late Middle Ages the county of Holland experienced a process of uncommonly rapid commercialisation. Comparing Holland to England and Flanders this book examines how the institutions that shaped commodity markets contributed to this remarkable development.

Brings global macro trading down to earth for individual and professional traders, investors and asset managers, as well being a useful reference handbook Global Macro Trading is an indispensable guide for traders and investors who want to trade Global Macro – it provides Trading Strategies and overviews of the four asset classes in Global Macro which include equities, currencies, fixed income and commodities. Greg Gliner, who has worked for some of the largest global macro hedge funds, shares ways in which an array of global macro participants seek to capitalize on this strategy, while also serving as a useful reference tool. Whether you are a retail investor, manage your own portfolio, or a finance professional, this book equips you with the knowledge and skills you need to capitalize in global macro. Provides a comprehensive overview of global macro trading, which consists of portfolio construction, risk management, biases and essentials to query building Equips the reader with introductions and tools for each of the four asset classes; equities, currencies, fixed income and commodities Arms you with a range of powerful global-macro trading and investing strategies, that include introductions to discretionary and systematic macro Introduces the role of central banking, importance of global macroeconomic data releases and demographics, as they relate to global macro trading

Proven techniques for market profile users at any level A "market profile" presents a number of basic elements from the market in an easily understood graphic format that, when analyzed properly, can yield profitable intraday and swing trades that traditional indicators do not reveal. Steidlmayer on Markets shows readers how to find these opportunities using the innovative techniques developed by the author during his many years of trading the market. This fully updated Second Edition covers innovations in both technology and technique-and broadens the scope of "market profile" to include stocks. J. Peter Steidlmayer (Chicago, IL) joined the Chicago Board of Trade in 1963 and has been an independent trader ever since. Steidlmayer served on the Board of Directors of the Board of Trade in 1981-1983. While a director, he was responsible for initiating Market Profile and the Liquidity Data Bank. Steve Hawkins (Chicago, IL) has experience in trading in both stocks and commodities. Over the past seven years, Hawkins has educated traders across the globe. He has also collaborated on the writing of books on trading and written articles for industry trade publications. He is a graduate of the University of Illinois with a degree in economics. New technology and the advent of around the clock trading have opened the floodgates to both foreign and domestic markets. Traders need the wisdom of industry veterans and the vision of innovators in today's volatile financial marketplace. The Wiley Trading series features books by traders who have survived the market's ever changing temperament and have prospered-some by reinventing systems, others by getting back to basics. Whether a novice trader, professional or somewhere in-between, these books will provide the advice and strategies needed to prosper today and well into the future.

Foreword In April1971, Los Angeles and its satellite cities were treated to one of its least interesting and least publicized elections in years. Nothing seemed to be hotly contested. A few Los Angeles city councilmen were up for reelection as were some members of the Board of Ed ucation and the Board of Trustees of the Community Colleges. - Nakanishi, Cooper and Kassarian [1974] Our colleague, Professor Harold H. Kassarian, ran for one of the seats on the Board of Trustees and received 17,286 votes. While he lost the election, he had collected the data which he felt characterized voting in such /low-invo/vement cases. He asked us to join him in writing a follow-up to a study of a similar election which had been published the previous fall in Public Opinion Quarterly. Neither of us was content with the methods and models used in the prior study. Shares are different than other criteria, be they vote shares, market shares or retail stores' shares of customers. Different methods are needed to reflect their special nature. And thus began a research collaboration, running 17 years, so far. Though our combined research efforts have covered diverse areas of consumer choice behavior, in recent years we came to the realization that our models and analytical methods might be very profitably employed in the analysis of market-share figures for consumer products.

The landscape of commodity markets has drastically changed in recent years. Once a market of refineries and mines, it has become the market of investment funds and commodity trading advisors. Given this transformation, are commodity investments still as beneficial as 20 or 30 years ago? This book is an attempt to answer these questions.

Seeds are the vehicle for delivering the improvements in a crop to the farmer's field. They are therefore a critical input in agricultural production. Seeds are also unique in that they must remain alive and healthy when they are used and that they are also the input that farmers can produce by themselves. Module 5 Seed Marketing, this module presents the underlying principles for valuing and exchanging seeds. This module describes all the activities which are undertaken in getting seeds from the producers to the end-users or farmers. The reader is provided guidance on how to conduct relevant research of the market for seeds, develop effective marketing strategies, articulate a marketing plan and manage the associated risks.

The U. S. Senate has been investigating case histories on the workings of the commodities markets, to ensure well-functioning markets with market-based prices, effective hedging tools, and safeguards against market manipulation, conflicts of interest, and excessive speculation. This is the report of an investigation of the recent rise of banks and bank holding companies as major players in the physical markets for commodities and related businesses. It presents case studies of three major U.S. bank holding companies, Goldman Sachs, JPMorgan Chase, and Morgan Stanley, that over the last decade were the largest bank holding company participants in physical commodity activities. The report shows how the tradition of separating banks from commerce is eroding, and along with it, protections from and potentially abusive conduct. It also shows how the Federal Reserve has taken insufficient steps to address this problem. Tables and figures. This is a print on demand report.

Ten Strategies of a World-Class Cyber Security Operations Center conveys MITRE's accumulated expertise on enterprise-grade computer network defense. It covers ten key qualities of leading Cyber Security Operations Centers (CSOCs), ranging from their structure and organization, to processes that best enable smooth operations, to approaches that extract maximum value from key CSOC technology investments. This book offers perspective and context for key decision points in structuring a CSOC, such as what capabilities to offer, how to architect large-scale data collection and analysis, and how to prepare the CSOC team for agile, threat-based response. If you manage, work in, or are standing up a CSOC, this book is for you. It is also available on MITRE's website, www.mitre.org.

Are all film stars linked to Kevin Bacon? Why do the stock markets rise and fall sharply on the strength of a vague rumour? How does gossip spread so quickly? Are we all related through six degrees of separation? There is a growing awareness of the complex networks that pervade modern society. We see them in the rapid growth of the Internet, the ease of global communication, the swift spread of news and information, and in the way epidemics and financial crises develop with startling speed and intensity. This introductory book on the new science of networks takes an interdisciplinary approach, using economics, sociology, computing, information science and applied mathematics to address fundamental questions about the links that connect us, and the ways that our decisions can have consequences for others.
