The Future of Nursing explores how nurses' roles, responsibilities, and education should change

significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

South African nurses care for patients in London, hospitals recruit Filipino nurses to Los Angeles, and Chinese nurses practice their profession in Ireland. In every industrialized country of the world, patients today increasingly find that the nurses who care for them come from a vast array of countries. In the first book on international nurse migration, Mireille Kingma investigates one of today's most important health care trends. The personal stories of migrant nurses that fill this book contrast the nightmarish existences of some with the successes of others. Health systems in industrialized countries now depend on nurses from the developing world to address their nursing shortages. This situation raises a host of thorny questions. What causes nurses to decide to migrate? Is this migration voluntary or in some way coerced? When developing countries are faced with nurse vacancy rates of more than 40 percent, is recruitment by industrialized countries fair play in a competitive market or a new form of colonialization? What happens to these workers—and the patients left behind—when they migrate? What safeguards will protect nurses and the patients they find in their new workplaces? Highlighting the complexity of the international rules and regulations now being constructed to facilitate the lucrative trade in human services, Kingma presents a new way to think about the migration of skilled health-sector labor as well as the strategies needed to make migration work for individuals, patients, and the health systems on which they depend.

The Evidence-Based Nursing Series is co-published with Sigma Theta Tau International (STTI). The series focuses on implementing evidence-based practice in nursing and mirrors the remit of Worldviews on Evidence-Based Nursing, encompassing clinical practice, administration, research and public policy. Models and Frameworks for Implementing Evidence-Based Practice: Linking Evidence to Action looks at ways of implementing evidence gained through research and factors that influence successful

implementation. It acknowledges the gap that exists between obtaining evidence and the practicalities of putting it into practice and provides direction to help to close this gap. This, the first book in the series, helps the reader to make decisions about the appropriateness of using various models and frameworks. A selection of models and frameworks are examined in detail including examples of their use in practice. The book concludes with an analysis and synthesis of the included models and frameworks. The models and frameworks that have been included are based on a number of criteria: that they are internationally recognised, have undergone widespread evaluation and testing, are transferable across different settings, and can be used by different disciplines. Models and frameworks include: Stetler Model Ottawa Model of Research Use IOWA model of evidence-based practice Advancing Research and Clinical Practice through Close Collaboration (ARCC) model Dobbins' dissemination and use of research evidence for policy and practice framework Joanna Briggs Institute model Knowledge to Action framework Promoting Action on Research Implementation in Health Services (PARiHS) Key Points: Includes an overview of implementation issues and the use of theory and frameworks in implementing evidence into practice Chapters are written by the developers of the model or framework Each chapter provides background on an implementation model or framework, suitable applications, underlying theory and examples of use Each chapter examines strengths and weaknesses of each model alongside barriers and facilitators for its implementation
