This book offers up-to-date information on all aspects of the use of lasers in endodontics, focusing especially on the various laser applications, including primary and permanent root canal therapies, retreatments, apical surgery and pulp therapy. Every laser technique used in endodontics is carefully described and illustrated, with detailed coverage of both conventional methods and more recent developments such as laser-activated irrigation and photon-induced photoacoustic streaming. In addition, a separate section addresses the basic science of laser dentistry, explaining the physics, describing laser/tissue interactions, and discussing different types of laser. Extensive reference is made to the international literature in order to provide the reader with a clear, evidence-based understanding of the merits of various approaches. In offering a balanced mix of descriptions of clinical applications, clinical data, scientific research and logical criticism, the book will serve as an excellent reference for a wide audience comprising general dentists as well as specialists.

This book provides detailed information on the emerging applications of nanomaterials and nanoparticles within endodontics, highlighting the exciting potential clinical impact of nanotechnology in the field. The range of applications covered is diverse, encompassing drug and gene delivery, tissue engineering, antibacterial strategies, dentin tissue stabilization, dentin pulp regeneration and use in restorative and endodontic materials. Important scientific background information relating to each application is provided, with clear coverage of basic principles. In addition, potential pitfalls are identified and explained. The cytotoxicity of nanomaterials and nanoparticles is also addressed in a separate chapter. The book will be of value both for endodontic practitioners and for all scientists and graduate students who are interested in the application of nanotechnology in endodontics.

It incorporates the changes that have occurred in endodontic theory and practice in terms of materials, concepts and protocols. The presentation of the concepts and techniques has also been revised.

This manual provides step-by-step pictures and illustrations of the various laboratory exercises, which students have to learn and perform in their first and second year BDS course for the preclinical conservative dentistry examination. This is the only book of its kind that would serve as a guide for learning as well as practicing the exercises on both plaster and typodont models in the preclinical laboratory. Segregated into 11 well defined chapters, the book: Provides synopsis of topics related to conservative dentistry and endodontics Includes clear description with illustrations of every instrument and equipment used Provides details regarding the composition, properties, uses and manipulation of various dental materials Includes clear description with images of the phantom head and typodont teeth used in the preclinical laboratory along with a beginner's pictorial guide in using airtor and micromotor rotary instruments Discusses various features, rules and fundamentals of tooth preparation Provides step-by-step pictorial representation along with explanation of all laboratory plaster and typodont model exercises Provides more than 300 commonly asked questions to help students prepare for their viva- voce examination along with frequently asked spotters Includes an exhaustive glossary of conservative dentistry and endodontic terms

Concise guide through fundamentals and concepts of paediatric dentistry, with detailed sections dedicated to sedation and anaesthesia.

Textbook of Prosthodontics encompasses all the different subspecialties of prosthodontics like Complete Dentures (CD), Removable Partial Dentures (RPD), Fixed Partial Dentures (FPD), Oral Implantology (OI) and Maxillofacial Prosthetics (MFP) with an aim to demystify the subject. The book provides a strong basic foundation along with contemporary clinical and laboratory applications. The book is written in an easy -to-comprehend-and-remember style, the clinical and laboratory aspects are depicted with colour photographs, radiographs, line arts, tables, boxes and flowcharts to make text self-explanatory. Useful for UGs as a prosthodontic textbook, an easy-to-practice book for the general practitioners and a basic reference for the PGs

Clean root canal systems are essential for successful endodontic treatment. With contributions from leading endodontists from around the world, Dr. Nestor Cohenca here presents the etiology of endodontic disease caused by the endodontic biofilm and all therapies available to predictably disinfect the root canal system, thus increasing successful endodontic outcomes. Disinfection of Root Canal Systems: The Treatment of Apical Periodontitis is an evidence-based manual that describes root canal anatomy, the endodontic biofilm, and the role of disinfection before presenting the most up-to-date methods of irrigation and disinfection. Individual chapters are devoted to each method, such as positive pressure irrigation, apical negative pressure irrigation, sonic activation, photodynamic therapy, laser technology, and ozonization and electrochemical activation. Clinical photographs throughout show proper irrigation and disinfection techniques. Key Features: Clinically focused to be of practical use to endodontists and general dentists Discusses the latest infection-control methodslasers, ozonization, electrochemical activation Photographs and illustrations show proper techniques and equipment
