~~— The Barefoot Architect Clear and comprehensive, The Barefoot Architect explains every aspect of green architecture, including design (siting, orientation, climate consideration), materials (sisal, cactus, bamboo, earth), and implementation (foundations, walls, partitions, floors, doors, and windows). Special attention is paid to ecotechniques, with an emphasis on inexpensive and sustainable solutions for three distinct regions: humid, temperate, and desert climates.~~

~~Presents the basics of architecture in an A-to-Z format--from Asymmetry to Zeal--pairing each entry with drawings that illustrate the concept. Original.~~

~~A fascinating guide to homemade shelter presents images and ideas culled from across the globe, including bottle homes in the Nevada desert, tree houses on the South China Sea, Japanese stilt houses, and much, much more. Original.~~

~~In 2004, Lloyd Kahn discovered a group of unique carpenters along the Pacific Coast of North America. Over a two-year period, he made four trips north from his home in the San Francisco Bay Area, up the coast, shooting the photos that appear in this book. To preserve homeowners' privacy, specific locations are not given, but suffice to say this book focuses on the Pacific Coast north from San Francisco up to and around Vancouver Island, British Columbia, latitudes 37 to 49 degrees. There's been a vortex of creative carpentry energy in this part of the world over the last 30 years. Many of the builders shown here got started in the countercultural era of the '60s and '70s, and their work has never been shown in books or magazine articles.~~

~~Bamboo has gained the name of "plant steel" in the fi eld of construction. Since ancient times, it has been widely used in Asia and Latin America. For many years bamboo had lost its role as a construction material in parts of the world where it grows indigenously due to an increase in the use of more modernmaterial. It was gradually replaced by concrete, steel and wood and became known as a "poor man's wood." Thanks to the research and design carried out by key worldwide architects and engineers in recent decades, this attractive natural material is being reconsidered as a construction and basic design material. This book features international examples of current projects where bamboo has been used as the main material.~~

~~How climate influenced the design strategies of modernist architects Modern Architecture and Climate explores how leading architects of the twentieth century incorporated climate-mediating strategies into their designs, and shows how regional approaches to climate adpatability were essential to the development of modern architecture. Focusing on the period surrounding World War II—before fossil-fuel powered air-conditioning became widely available—Daniel Barber brings to light a vibrant and dynamic architectural discussion involving design, materials, and shading systems as means of interior climate control. He looks at projects by well-known architects such as Richard Neutra, Le Corbusier, L ú cio Costa, Mies van der Rohe, and Skidmore, Owings, and Merrill, and the work of climate-focused architects such as MMM Roberto, Olgijay and Olgjaj, and Cliff May. Drawing on the editorial projects of James Marston Fitch, Elizabeth Gordon, and others, he demonstrates how images and diagrams produced by architects helped conceptualize climate knowledge, alongside the work of meteorologists, physicists, engineers, and social scientists. Barber describes how this novel type of environmental media catalyzed new ways of thinking about climate and architectural design. Extensively illustrated with archival material, Modern Architecture and Climate provides global perspectives on modern architecture and its evolving relationship with a changing climate, showcasing designs from Latin America, Europe, the United States, the Middle East, and Africa. This timely and important book reconciles the cultural dynamism of architecture with the material realities of ever-increasing carbon emissions from the mechanical cooling systems of buildings, and offers a historical foundation for today ' s zero-carbon design.~~

~~This beautifully illustrated book showcases the works of one of Sri Lanka's most influential architects—Anjale dran, an ethnic Tamil and visionary artist. During the past 25 years of civil war in Sri Lanka, Anjale dran has stayed on, creating architecture that has attracted interest across the entire Indian subcontinent. In Anjale dran, David Robson explores this unique man and his uncommon vision. Anjale dran's buildings have a simple directness and although totally modern in spirit, they acknowledge the rich design traditions of Sri Lanka. Whether working with ample budgets or at rock bottom cost (like his SOS Children's Village orphanages), his work focuses not only on creative buildings, but—à la Frank Lloyd Wright—also their landscaping, furniture and decoration. Just as interesting as the architecture is the process by which Anjale dran works—from home, never employing more than four student assistants, with no office, no secretary, no car and no cell phone. He operates without a bank account and has never signed a contract with either a client or a builder. With stunning color photographs, plan details and behind-the-scenes insights, Anjale dran sheds light on the works of this exceptional man.~~

~~"Brown's book Just Enough is a compelling account of how Edo Japan confronted similar environmental problems and created solutions that connected farms and cities, people and nature." —Huffington Post The world has changed immeasurably over the last thirty years, with more, bigger, better being the common mantra. But in the midst of this constantly evolving world, there is a growing community of people who are looking at our history, searching for answers to issues that are faced everywhere, such as energy, water, materials, food and population crisis. In Just Enough, author Azby Brown turned to the history of Japan, where he finds a number of lessons on living in a sustainable society that translate beyond place and time. This book of stories depicts vanished ways of life from the point of view of a contemporary observer and presents a compelling argument around how to forge a society that is conservation-minded, waste-free, well-housed, well-fed and economically robust. Included at the end of each section are lessons in which Brown elaborates on what Edo Period life has to offer us in the global battle to reverse environmental degradation. Covering topics on everything from transportation, interconnected systems, and waste reduction to the need for spiritual centers in the home, there is something here for everyone looking to make changes in their life. Just Enough is a much-needed beacon in our evolving world, giving us hope in our efforts to achieve sustainability now.~~
