dhcpd (an abbreviation for "DHCP daemon") is a DHCP server program that operates as a daemon on a server to provide Dynamic Host

Configuration Protocol (DHCP) service to a network. This implementation, also known as ISC DHCP, is one of the first and best known, but there are now a number of other DHCP server software implementations available.. Clients may solicit an IP address from a DHCP ...

The Dynamic Host Configuration Protocol (DHCP) provides a way to automate and manage the network configurations of devices that use the TCP/IP protocol suite. Without DHCP, network administrators must manually enter in IP addresses for each computer and network device and then manually change that address each time the device is moved to a different part of the network. The DHCP Handbook, Second Edition is a complete reference for understanding DHCP, deploying and managing DHCP services, and debugging problems with DHCP clients and servers. Chapters devoted to failover, authentication, Windows 2000, DHCPv6, and DHCP/DNS interaction reflect the recent updates to the standard and issues that are most pertinent to network planners and administrators. Throughout the book, the authors are careful to balance conceptual discussions of DHCP with detailed implementation examples and practical advice.

This guide to the set up and management of a DHCP server offers both an introduction to DHCP and a detailed look at operation. Users will also get advice on using DHCP in different environments and managing the interaction between DHCP servers and clients. Several appendices provide a resource for networking professionals.

This book is a tutorial on, and a guide to the deployment of, Public-Key Infrastructures. It covers a broad range of material related to

PKIs, including certification, operational considerations and standardization efforts, as well as deployment issues and considerations. Emphasis is placed on explaining the interrelated fields within the topic area, to assist those who will be responsible for making deployment decisions and architecting a PKI within an organization.

The official "Fedora 15 Deployment Guide" covers deployment, configuration, and administration of Fedora 15. It is oriented towards system administrators with a basic understanding of the system.
