ASQ's Certified Quality Improvement Associate (CQIA) certification is designed to introduce the basics of quality to organizations and individuals not currently working within the field of quality. This book and the Body of Knowledge (BOK) it supports are intended to form a foundation for further study and application of proven quality principles and practices worldwide. The book follows the CQIA BoK in both content and sequence. The intent is that this book will serve as a guide to be used in preparation to take the CQIA examination given by ASQ. Each chapter stands alone, and the chapters may be read in any order. Some material reaching beyond the content of the BoK has been added. Supplemental reading suggestions are provided. An online, interactive sample exam and a paper-and-pencil sample can be found on the ASQ website (<http://asq.org/cert/quality-improvement-associate/prepare>).

Study more efficiently by focusing on the core concepts necessary to pass the ASQ Certified Quality Technician Exam. This book provides practice exams of representative difficulty that reflect the Body of Knowledge for the CQT Exam and detailed breakdowns of the answers. This book includes: 200 Practice Problems based exactly off of the ASQ CQT Body of Knowledge Detailed solutions providing insight into the correct answer and a breakdown of relevant information to the question It is easy to get overwhelmed with the amount of information presented in study guides and references. These practice exams focus your attention appropriately so that you may make the best use of your time and show up on test day as prepared as possible. Pearson Publishing and the Center for the Advancement of Process Technology (CAPT) have partnered to publish a series of books designed to aid in the education and development of technicians in the field of Process Technology. These books, which are based on a set of nationally identified objectives, are designed to address the core needs of both industry and education. Reviewers from a broad array of process industries and education institutions participated in the production of these materials so that the widest audience possible would be represented in the presentation of the content. The book is intended for use in community colleges, technical colleges, universities and corporate settings in which process technology is taught. An invaluable resource to be used throughout a process technology career, this book is a complete reference for both theory and practical application. The Center for the Advancement of Process Technology (CAPT) currently offers several instructor manuals and student workbooks for their books. Currently these must be PURCHASED by the instructor or institution. These materials, order forms, and pricing, can be viewed and purchased at this website: <http://www.capttech.org/curriculum/products.php>

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DECIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
