Globalization has jarred the traditional role and competitiveness of small- and medium-sized enterprises. This masterful volume comprises leading scholars, policy makers and business leaders who have new insights and strategies for SMEs creating opportunities rather than being victims of globalization. The result is a breakthrough in our understanding of entrepreneurship in the global context. David B. Audretsch, Indiana University, Bloomington, US and WHU, Germany Small and medium-sized enterprises (SMEs) often have difficulty competing in the global economy unless they collaborate with domestic or foreign partners or with public sector organizations. This book addresses the resource leverage and innovation challenges that increased global trade represents for SMEs. In doing so, it explores how SMEs can become more competitive at home and in foreign markets as stand-alone firms or as members of supplier and customer networks. SMEs are turning increasingly to innovation as a source of competitive advantage in order to protect their home markets and participate in expanding foreign markets. The contributors to this volume leading experts in entrepreneurship, innovation, and international business

Capturing the serene beauty of planets, stars, and celestial bodies is both fine art and scientific discovery. Fascinating, challenging, and extremely rewarding, astrophotography is a pursuit that is greatly enhanced by gaining access to the type of detailed instruction this book offers, with charts, tables, over (number of TK) images, and real-life troubleshooting advice in detailed case studies. The Astrophotography Manual is for those astrophotographers who wish to swiftly move beyond using standard SLR cameras and Photoshop, and who are ready to create beautiful images of nebulae, galaxies, clusters, and the solar system. Beginning with a brief astronomy primer, this book takes readers through the full astrophotography process, from equipment choice and set-up, through image acquisition, image calibration, and processing. Along the way it explains how sensor performance and light pollution relate to image quality and exposure planning. This book will satisfy the technical and practical reader and uses case studies to illustrate the entire process, using a range of equipment (including tablets and smartphones), exploring deep sky and planetary objects, and utilizing a variety of software, including Maxim, Nebulosity, Photoshop, RegiStax and PixInsight.
